PROJECT REPORT

MINI PROJECT

TITLE: **Online Course Registration**

Platform: Visual Basic 6.0 and MS ACCESS

TITLE: **Online Technical Quiz**

Platform: JAVA and MS ACCESS

FINAL YEAR PROJECT

TITLE: **XXXXXXX**

DESCRIPTION:

Domain: Image Processing

Platform: MATLAB

The goal of my project is to restore the missing data from the blur image, blur image occurred due to capturing the moving object and also by camera shake, advantage in my project is blur image can be restored with perceptual analysis by using a technique called Edge Mapping and in initial Wiener Filter, Lucy Richardson, Blind De-convolution this are the de-blurring techniques used to restore the blur image. After the blur image is restored Edge Mapping concept is used to get the edges present in the restored image, at which the brightness changes are typically organized into a set of curved line segment termed edges. After that the edges of the restored image and knowledge reference image are analyzed to obtain possible perception with high accuracy.
